Google Trends API - SerpApi

Google Trends API

API uptime

97.651%

Our Google Trends API allows you to scrape results from the Google Trends search page. The API is accessed through the following endpoint:

[/search?engine=google\\_trends](#)

A user may query the following:

[https://serpapi.com/search?engine=google\\_trends](https://serpapi.com/search?engine=google_trends) ([https://serpapi.com/search?engine=google\\_trends](https://serpapi.com/search?engine=google_trends))

utilizing a

GET

request. Head to the

playground

for a live and interactive demo.

API Parameters

Search Query

q

Required

Parameter defines the query or queries you want to search. You can use anything that you would use in a regular Google Trends search. The maximum number of queries per search is

5

(this only applies to

"Interest over time"

and

"Compared breakdown by region"

data\_type

, other types of data will only accept

1

query per search).

When passing multiple queries you need to use a comma (

,

) to separate them (e.g.

coffee,pizza,dark chocolate,/m/027lnzs,bread

).

Query can be a

"Search term"

(e.g.

World Cup

,

Eminem

,

iPhone

, etc.) or a

"Topic"

(e.g.

/m/0663v

,

/m/027lnzs

,

/g/11mw8j71m4

, etc.). Queries that are

"Topics"

are encoded. To retrieve these values you can use our

Google Trends Autocomplete API

.

Maximum length for each query is 100 characters.

Geographic Location

hl

Optional

Parameter defines the language to use for the Google Trends search. It's a two-letter language code. (e.g.,

en

for English,

es

for Spanish, or

fr

for French). Head to the

Google languages page

for a full list of supported Google languages.

geo

Optional

Parameter defines the location from where you want the search to originate. It defaults to

Worldwide

(activated when the value of

geo

parameter is not set or empty). Head to the

Google Trends Locations

for a full list of supported Google Trends locations.

region

Optional

Parameter is used for getting more specific results when using

"Compared breakdown by region"

and

"Interest by region"

data\_type

charts. Other

data\_type

charts do not accept

region

parameter. The default value depends on the

geo

location that is set. Available options:

COUNTRY

- Country

REGION

- Subregion

DMA

- Metro

CITY

- City

Not all

region

options will return results for every

geo

location

.

Search Type

data\_type

Optional

Parameter defines the type of search you want to do. Available options:

TIMESERIES

-

## Interest over time

(default) - Accepts both single and multiple queries per search.

### GEO\_MAP

-

Compared breakdown by region

- Accepts only multiple queries per search.

### GEO\_MAP\_0

-

Interest by region

- Accepts only single query per search.

### RELATED\_TOPICS

-

Related topics

- Accepts only single query per search.

### RELATED\_QUERIES

-

Related queries

- Accepts only single query per search.

## Advanced Google Trends Parameters

tz

Optional

Parameter is used to define a

time zone offset

. The default value is set to

420

(Pacific Day Time(PDT): -07:00). Value is shown in minutes and can span from

-1439

to

1439

.

tz

can be calculated using the time difference between UTC +0 and desired timezone.

Examples:

420

- PDT

600

- Pacific/Tahiti

-540

- Asia/Tokyo

- Canada/Pacific.

To make sure the value is correct, please refer to the

time zone database

and your programming language UTC offset calculation. You may visit

the documentation

to get more information.

cat

Optional

Parameter is used to define a search category. The default value is 0 (All categories). You can find or download all supported values in the

Google Trends Categories list

. Note that these are different from the categories supported for

Google Trends Trending Now

gprop

Optional

Parameter is used for sorting results by property. The default property is set to

Web Search

(activated when the value of

gprop

parameter is not set or empty). Other available options:

images

- Image Search

news

- News Search

froogle

- Google Shopping

youtube

- YouTube Search

date

Optional

Parameter is used to define a date. Available options:

now 1-H

- Past hour

now 4-H

- Past 4 hours

now 1-d

- Past day

now 7-d

- Past 7 days

today 1-m

- Past 30 days

today 3-m

- Past 90 days

today 12-m

- Past 12 months

today 5-y

- Past 5 years

all

- 2004 - present

You can also pass custom values:

Dates from 2004 to present:

yyyy-mm-dd yyyy-mm-dd

(e.g.

2021-10-15 2022-05-25

)

Dates with hours within a week range:

yyyy-mm-ddThh yyyy-mm-ddThh

(e.g.

2022-05-19T10 2022-05-24T22

). Hours will be calculated depending on the

tz

(time zone) parameter.

csv

Optional

Parameter is used for retrieving the CSV results. Set the parameter to

true

to retrieve CSV results as an array.

include\_low\_search\_volume

Optional

Parameter is used for including low search volume regions in the results. Set the parameter to

true

to include low search volume regions in the results.

This parameter is ignored if

data\_type

is not set to

GEO\_MAP

or

GEO\_MAP\_0

.

## Serpapi Parameters

engine

Required

Set parameter to

google\_trends

to use the Google Trends API engine.

no\_cache

Optional

Parameter will force SerpApi to fetch the Google Trends results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to

false

(default) to allow results from the cache, or

true

to disallow results from the cache.

no\_cache

and

async

parameters should not be used together.

async

Optional

Parameter defines the way you want to submit your search to SerpApi. It can be set to

false

(default) to open an HTTP connection and keep it open until you got your search results, or

true

to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our

## Searches Archive API

to retrieve your results.

async

and

no\_cache

parameters should not be used together.

async

should not be used on accounts with

Ludicrous Speed

enabled.

zero\_trace

Optional

Enterprise only. Parameter enables

ZeroTrace mode

. It can be set to

false

(default) or

true

. Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

api\_key

Required

Parameter defines the SerpApi private key to use.

output

Optional

Parameter defines the final output you want. It can be set to json (default) to get a structured

JSON

of the results, or

html

to get the raw html retrieved.

json\_restrictor

Optional

Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See

JSON Restrictor

for more details.

API Results

JSON Results

JSON output includes structured data for

Interest over time

,

Compared breakdown by region

,

Interest by region

,

Related queries

and

Related topics

.

A search status is accessible through

search\_metadata.status

. It flows this way:

Processing

->

Success

||

Error

. If a search has failed,

error

will contain an error message.

search\_metadata.id

is the search ID inside SerpApi.

HTML Results

HTML output is useful to debug JSON results or support features not supported yet by SerpApi. HTML output gives you the raw HTML results from Google Trends.

This API does not have html response, just a text.

search\_metadata.prettify\_html\_file

contains prettified version of the result. It is displayed in the playground.

```

#### Search results for a specified

category

with no query provided

A Google Trends search without a query is valid with filters (

cat

). In this example, it is filtered to show only

#### TIMESERIES

results from the category

319

(Cartoons).

JSON Example

```
{ "search_parameters": { "engine": "google_trends", "cat": "319", "date": "today 12-m", "tz": "420", "data_type": "TIMESERIES" }, "interest_over_time": { "timeline_data": [ { "date": "Apr 30-May 6, 2023", "timestamp": "1682812800", "values": [ { "value": "81", "extracted_value": 81 } ] }, { "date": "May 7-13, 2023", "timestamp": "1683417600", "values": [ { "value": "77", "extracted_value": 77 } ] }, { "date": "May 14-20, 2023", "timestamp": "1684022400", "values": [ { "value": "84", "extracted_value": 84 } ] }, ... ], ... }
```

Understanding the

tz

parameter

The

tz

parameter in our Google Trends API is calculated as the

UTC offset in minutes

.

For instance, consider Tokyo, which operates on JST (UTC+9). If the local time is 3:00 PM in Tokyo, UTC time is 6:00 AM. The calculation for

tz

would be (9 hours ahead of UTC) \* 60 minutes, resulting in a

tz

value of -540. (If you subtract 540 minutes, you get back to UTC.) This parameter ensures that time-sensitive data aligns correctly with the selected region's local time.

Additionally, the

tz

parameter influences search results based on different

date

parameter values. For example, in queries like "sakura," the effect of

tz

can be observed up to 7 days of data (using

"now 7-d"

as the

date

parameter). Any

date

value below 7 days will still affect the results. This impact might vary for different queries and their respective date parameters.

It is important to adjust this value based on daylight saving changes or other time variations to maintain data accuracy. The

tz

range spans from -1439 to 1439, allowing for granular control over time zone settings in the API response.

To make sure the value is correct, please refer to the

time zone database

and your programming language UTC offset calculation.

Google Trends Interest Over Time API - SerpApi

Google Trends Interest Over Time API

When a Google Trends search contains interest over time results, they are parsed and exist within the

interest\_over\_time

object in the JSON output. Interest over time can contain

timeline\_data

and

averages

array results. From

timeline\_data

we are able to extract

date

and

values

array which contains

query

,

value

, and

extracted\_value

. From

averages

we are able to extract

query

and

value

.

Interest over time chart accepts both single and multiple queries per search.

API Parameters

data\_type

Required

Parameter must be set to

TIMESERIES

. (I.e.,

data\_type=TIMESERIES

)

API Examples

Example with multiple queries

JSON Example

```
{ "interest_over_time": { "timeline_data": [ { "date": "May 30 – Jun 5, 2021", "timestamp": "1622304000", "values": [ { "query": "coffee", "value": "80", "extracted_value": 80 }, { "query": "milk", "value": "58", "extracted_value": 58 }, { "query": "bread", "value": "35", "extracted_value": 35 }, ... ] }, { "date": "Jun 6 – 12, 2021", "timestamp": "1622822400", "values": [ { "query": "coffee", "value": "75", "extracted_value": 75 }, { "query": "milk", "value": "54", "extracted_value": 54 }, { "query": "bread", "value": "35", "extracted_value": 35 }, ... ] }, { "date":
```

"Jun 13 – 19, 2021", "timestamp": "1623513600", "values": [ { "query": "coffee", "value": "78", "extracted\_value": 78 }, { "query": "milk", "value": "54", "extracted\_value": 54 }, { "query": "bread", "value": "35", "extracted\_value": 35 }, ... ], ... ], "averages": [ { "query": "coffee", "value": 84 }, { "query": "milk", "value": 55 }, { "query": "bread", "value": 39 }, ... ] }

Example with single query

JSON Example

```
{ "interest_over_time": { "timeline_data": [ { "date": "May 30 – Jun 5, 2021", "timestamp": "1622304000", "values": [ { "query": "coffee", "value": "80", "extracted_value": 80 } ] }, { "date": "Jun 6 – 12, 2021", "timestamp": "1622822400", "values": [ { "query": "coffee", "value": "74", "extracted_value": 74 } ] }, { "date": "Jun 13 – 19, 2021", "timestamp": "1623513600", "values": [ { "query": "coffee", "value": "78", "extracted_value": 78 } ] }, ... ] }
```

(<https://serpapi.com/google-trends-related-queries>)

Google Trends Related Queries API - SerpApi

Google Trends Related Queries API

When a Google Trends search contains related queries, they are parsed and exist within the

related\_queries

object in the JSON output. Related queries can contain

rising

and

top

array results. From these results, we can extract

query

,

value

,

extracted\_value

, and

link

.

Related queries chart accepts only single query per search.

API Parameters

data\_type

Required

Parameter must be set to

RELATED\_QUERIES

. (i.e.,

data\_type=RELATED\_QUERIES

)

API Examples

Example with

q

:

coffee

The

value

field represents the label shown by Google Trends and can be either a percentage increase (for example,

+250%

) or a textual label for record breakouts (for example,

Breakout

). In some languages, Google localizes this label (for example, French UI shows

Record

for

Breakout

). The

extracted\_value

corresponds to the numeric percentage increase, which can be very large when the baseline search volume was low.

JSON Example

```
{ "related_queries": { "rising": [ { "query": "usagi coffee", "value": "Breakout", "extracted_value": 8700, "link": "https://trends.google.com/trends/explore?q=usagi+coffee&date=today+12-m&geo=FR", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_QUERIES&date=today+12-m&engine=google_trends&geo=FR&hl=en&q=usagi+coffee&tz=420" }, { "query": "bacha coffee champs-élysées", "value": "Breakout", "extracted_value": 7050, "link": "https://trends.google.com/trends/explore?q=bacha+coffee+champs-%C3%A9lys%C3%A9es&date=today+12-m&geo=FR", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_QUERIES&date=today+12-m&engine=google_trends&geo=FR&hl=en&q=bacha+coffee+champs-%C3%A9lys%C3%A9es&tz=420" }, { "query": "crep and coffee", "value": "+4,500%", "extracted_value": 4500, "link": "https://trends.google.com/trends/explore?q=crep+and+coffee&date=today+12-m&geo=FR", "serpapi_link":

Google Trends Autocomplete API - SerpApi

Google Trends Autocomplete API

API uptime

100.000%

Our Google Trends Autocomplete API allows you to scrape suggested searches from the Google Trends search page. The API is accessed through the following endpoint:

`/search?engine=google_trends_autocomplete`

.

A user may query the following:

[https://serpapi.com/search?engine=google\\_trends\\_autocomplete](https://serpapi.com/search?engine=google_trends_autocomplete) ([https://serpapi.com/search?engine=google\\_trends\\_autocomplete](https://serpapi.com/search?engine=google_trends_autocomplete))

utilizing a

GET

request. Head to the

playground

for a live and interactive demo.

API Parameters

Search Query

q

Required

Parameter defines the query you want to search. You can use anything that you would use in a regular Google Trends search. The query is used to retrieve suggested searches.

Localization

hl

Optional

Parameter defines the language to use for the Google Trends Autocomplete search. It's a two-letter language code. (e.g.,

en

for English,

es

for Spanish, or

fr

for French). Head to the

Google languages page

for a full list of supported Google languages.

Serpapi Parameters

engine

Required

Set parameter to

google\_trends\_autocomplete

to use the Google Trends Autocomplete API engine.

no\_cache

Optional

Parameter will force SerpApi to fetch the Google Trends Autocomplete results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to

false

(default) to allow results from the cache, or

true

to disallow results from the cache.

no\_cache

and

async

parameters should not be used together.

async

Optional

Parameter defines the way you want to submit your search to SerpApi. It can be set to

false

(default) to open an HTTP connection and keep it open until you got your search results, or

true

to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our

Searches Archive API

to retrieve your results.

async

and

no\_cache

parameters should not be used together.

async

should not be used on accounts with

Ludicrous Speed

enabled.

zero\_trace

Optional

Enterprise only. Parameter enables

ZeroTrace mode

. It can be set to

false

(default) or

true

. Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

api\_key

Required

Parameter defines the SerpApi private key to use.

output

Optional

Parameter defines the final output you want. It can be set to json (default) to get a structured

JSON

of the results, or

html

to get the raw html retrieved.

json\_restrictor

Optional

Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See

JSON Restrictor

for more details.

API Results

JSON Results

JSON output includes structured data for suggested searches.

A search status is accessible through

search\_metadata.status

. It flows this way:

Processing

->

Success

||

Error

. If a search has failed,

error

will contain an error message.

search\_metadata.id

is the search ID inside SerpApi.

HTML Results

HTML output is useful to debug JSON results or support features not supported yet by SerpApi. HTML output gives you the raw HTML results from Google Trends.

This API does not have html response, just a text.

search\_metadata.prettify\_html\_file

contains prettified version of the result. It is displayed in the playground.

API Examples

Example with

q

:

Stripe

JSON Example

```
{ "search_metadata": { "id": "62cc0e6bde983400ad34aa10", "status": "Success", "json_endpoint":

Google Trends Related Topics API - SerpApi

Google Trends Related Topics API

When a Google Trends search contains related topics, they are parsed and exist within the

related\_topics

object in the JSON output. Related topics can contain

rising

and

top

array results. From these results, can extract

value

,

extracted\_value

,

link

, and

topic

object which contains

value

,

title

, and

type

.

Related topics chart accepts only single query per search.

API Parameters

data\_type

Required

Parameter must be set to

RELATED\_TOPICS

. (i.e.,

data\_type=RELATED\_TOPICS

)

API Examples

Example with

q

:

coffee

JSON Example

```
{ "related_topics": { "rising": [ { "topic": { "value": "/g/11qrhc4zy2", "title": "Coffee and lemon", "type": "Food" }, "value": "+2,300%", "extracted_value": 2300, "link": "https://trends.google.com/trends/explore?q=/g/11qrhc4zy2&date=today+12-m", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_TOPICS&date=today+12-m&engine=google_trends&q=/g/11qrhc4zy2&tz=420" }, { "topic": { "value": "/m/09k_b", "title": "Lemon", "type": "Fruit" }, "value": "+450%", "extracted_value": 450, "link": "https://trends.google.com/trends/explore?q=/m/09k_b&date=today+12-m", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_TOPICS&date=today+12-m&engine=google_trends&q=/m/09k_b&tz=420" }, { "topic": { "value": "/m/0cp66xy", "title": "Tata Coffee", "type": "Company" }, "value": "+80%", "extracted_value": 80, "link": "https://trends.google.com/trends/explore?q=/m/0cp66xy&date=today+12-m", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_TOPICS&date=today+12-m&engine=google_trends&q=/m/0cp66xy&tz=420" }, ... ], "top": [ { "topic": { "value": "/m/02vqfm", "title": "Coffee", "type": "Drink" }, "value": "100", "extracted_value": 100, "link": "https://trends.google.com/trends/explore?q=/m/02vqfm&date=today+12-m", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_TOPICS&date=today+12-m&engine=google_trends&q=/m/02vqfm&tz=420" }, { "topic": { "value": "/m/020fb2", "title": "Cafe", "type": "Topic" }, "value": "12", "extracted_value": 12, "link": "https://trends.google.com/trends/explore?q=/m/020fb2&date=today+12-m", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_TOPICS&date=today+12-m&engine=google_trends&q=/m/020fb2&tz=420" }, { "topic": { "value": "/m/07xyvk", "title": "Coffeemaker", "type": "Topic" }, "value": "10", "extracted_value": 10, "link": "https://trends.google.com/trends/explore?q=/m/07xyvk&date=today+12-m", "serpapi_link": "https://serpapi.com/search.json?data_type=RELATED_TOPICS&date=today+12-m&engine=google_trends&q=/m/07xyvk&tz=420" }, ... ] } }

JSON Restrictor

Restrict your response to the fields you need for smaller, faster results and more efficient client-side parsing.

We support passing a

json\_restrictor

parameter for all engines.

Examples

Select only

organic\_results

Operators

Operator

Example

Description

Object index:

.

foo.bar

Select the field

bar

of the object

foo

.

Array index:

[]

foo[0]

Select the first item of the array

foo

.

Select full array:

[]

foo[]

Select all items of the array

foo

.

Array slice:

[:]

foo[0:2]

Select the first two items of the array

foo

.

This is a half-open range, meaning it includes the first index but not the last.

Subquery:

{query1, query2, ...}

foo.{bar, baz[].qux}

Select the fields

bar

and

baz

of the object

foo

, and further select only

qux

of the array

baz

.

A query can be any valid combination of the operators.

ZeroTrace Mode

Keep your searches confidential.

Available with all Enterprise plans

Your data won't leave a trace

When you enable ZeroTrace Mode, we won't store search parameters, search files, or search data on our servers. Once your search is done, it's as if it were never here.

Enable by just adding

`zero_trace=true`

to your search

ZeroTrace Mode is easy to enable or disable. Just add

`zero_trace=true`

to the searches you want ZeroTrace on, and omit it for the searches you don't.

Easier Compliance

ZeroTrace mode can make it easier to comply with regulations (GDPR, HIPAA, and CCPA) and certifications (SOC 2 Type 1, SOC 2 Type 2, and ISO 27001).

FAQs

How to access ZeroTrace mode?

ZeroTrace mode is only included in Enterprise plans. There is no cap on usage.

Can this feature be used with all of SerpApi's search APIs?

Yes, ZeroTrace mode is fully supported on all SerpApi's search APIs.

How does ZeroTrace mode work?

We skip saving parameters, metadata, and the actual search in our database entirely. We also don't store any files or search-related data on any of our servers, including our servers that connect to the actual search engines. For third-party services or search engines that are by nature outside our direct control, we add a Do Not Track (DNT) header to all HTTP requests that may contain ZeroTrace search data.

How can I debug ZeroTrace Searches?

Unfortunately, it's more difficult to debug ZeroTrace searches. We recommend re-running without the

`zero_trace=true`

flag, finding them back on your dashboard, and contacting support if needed.
