eBay Search Engine Results API - SerpApi

eBay Search Engine Results API

API uptime

100.000%

[/search?engine=ebay](#)

API endpoint allows you to scrape the results from the eBay search engine via our SerpApi service. Head to the

[playground](#)

for a live and interactive demo.

API Parameters

Search Query

`_nkw`

Required

Parameter defines the search query. You can use anything that you would use in a regular eBay search.

`_nkw`

parameter is optional when

`category_id`

parameter is specified.

Localization

`ebay_domain`

Optional

Parameter defines the eBay domain to use. It defaults to

`ebay.com`

. Head to the

[eBay domains](#)

for a full list of supported eBay domains.

`_salic`

Optional

Parameter defines the location based on country. Head to the

[eBay location options](#)

for a full list of supported countries.

Pagination

`_pgn`

Optional

Parameter defines the page number. It's used for pagination. (e.g.,

(default) is the first page of results,

2

is the 2nd page of results,

3

is the 3rd page of results, etc.).

_ipg

Optional

Parameter defines the maximum number of results to return. There are total of four options:

25

,

50

(default),

100

and

200

results.

Advanced Filters

_blrs

Optional

Parameter defines the exclusion of results from an auto-corrected query when the original query is spelled wrong. The recommended value for this parameter is

spell_auto_correct

. Omit

_blrs

if you want the search to include results for an auto-corrected query. Note that this parameter may not prevent eBay from returning results for an auto-corrected query if no other results are available.

show_only

Optional

Parameter defines the list of filters you can apply to the results.

Available options

(case-sensitive)

:

Complete

- Completed items

Sold

- Sold items

FR

- Free returns

RPA

- Returns accepted

AS

LPickup

- Local pickup

You can also combine multiple filter values by joining them with a comma (

value

+

,

+

value

; eg:

Sold,FS

).

buying_format

Optional

Parameter defines the buying format you can apply to the results.

Available options

(case-sensitive)

:

Auction

- Auction

BIN

- Buy It Now

BO

- Accepts Offers

Advanced Ebay Parameters

_udlo

Optional

Parameter defines the lowest price of items that should be included in the results (e.g.

10

will only return items that have higher price than

10

).

_udhi

Optional

Parameter defines the highest price of items that should be included in the results (e.g.

20

will only return items that have lower price than

20

).

_sop

Optional

Parameter defines results sorted by different options in the eBay. The default option is 'Best Match'. Head to the

eBay sort options

for a full list of supported sort options.

_dmd

Optional

Parameter defines the visual layout for displaying results. The available options are 'Grid' and 'List'.

category_id

Optional

Parameter defines the ID of a category where you want your search to be concentrated. ID values are accessible inside

categories

array, located in our JSON output (e.g.

categories[1].id

).

You can search using

category_id

parameter without specifying

_nkw

parameter.

_stpos

Optional

Parameter defines the ZIP or Postal code. You can use it to filter the shipping products by a selected area.

LH_ItemCondition

Optional

Parameter defines one or multiple product conditions to limit the search to. Condition is represented via numeric ID, e.g.

1000

for

New

. Multiple IDs should be joined with

|

delimiter, e.g.

1000|3000

. List of supported IDs can be found on

eBay documentation page

. There is also undocumented ID

10

for

Not Specified

condition.

LH_PrefLoc

Optional

Parameter defines the preferred location. The available options are 'Domestic', 'Regional', and 'Worldwide'.

Serpapi Parameters

engine

Required

Set parameter to

ebay

to use the Ebay API engine.

no_cache

Optional

Parameter will force SerpApi to fetch the Ebay results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to

false

(default) to allow results from the cache, or

true

to disallow results from the cache.

no_cache

and

async

parameters should not be used together.

async

Optional

Parameter defines the way you want to submit your search to SerpApi. It can be set to

false

(default) to open an HTTP connection and keep it open until you got your search results, or

true

to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our

Searches Archive API

to retrieve your results.

`async`

and

`no_cache`

parameters should not be used together.

`async`

should not be used on accounts with

Ludicrous Speed

enabled.

`zero_trace`

Optional

Enterprise only. Parameter enables

ZeroTrace mode

. It can be set to

`false`

(default) or

`true`

. Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

`api_key`

Required

Parameter defines the SerpApi private key to use.

`output`

Optional

Parameter defines the final output you want. It can be set to `json` (default) to get a structured

JSON

of the results, or

`html`

to get the raw html retrieved.

`json_restrictor`

Optional

Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See

JSON Restrictor

for more details.

API Results

JSON Results

JSON output includes structured data for

organic results

and more.

A search status is accessible through

search_metadata.status

. It flows this way:

Processing

->

Success

||

Error

. If a search has failed,

error

will contain an error message.

search_metadata.id

is the search ID inside SerpApi.

HTML Results

HTML output is useful to debug JSON results or support features not supported yet by SerpApi.

HTML output gives you the raw HTML results from eBay.

eBay Organic Results API - SerpApi

eBay Organic Results API

eBay search main results are called organic results. Some results are simple and straightforward. Others include rich data like reviews, condition, shipping and other special snippets.

SerpApi is able to scrape, extract, and make sense of both simple and more complex organic results.

API Examples

Organic results overview

When SerpApi encounters organic results, we add them to our JSON output as the array

organic_results

. For each organic result, we are able to extract its

title
,
subtitle
,
link
,
condition
,
price
,
shipping
,
seller
,
thumbnail
and more.

JSON Example

```

Search Archive API - SerpApi

Search Archive API

Search Archive API allows you to fetch searches created with our API. Searches don't have to be completed to be retrieved. Search status can be

Queued

,

Processing

,

Success

, or an error. You can retrieve the

html

, or the

json

of your search up to 31 days after the search has been completed.

You can query

https://serpapi.com/searches/{search_id} (https://serpapi.com/searches/{search_id}%7Bsearch_id%7D).

using a

GET

request with these parameters:

API Parameters

search_id

Required

Parameter is the search ID provided by the search API endpoint at

`['search_metadata']['id']`

. (e.g.,

5b50d58a304bda2fca30bac9

)

api_key

Required

Parameter defines the SerpApi private key to use.

output

Optional

Parameter defines the file you want. It can be set to

json

(default) to get a structured JSON of the results, or

html

to get the raw html retrieved.

API Examples

ZeroTrace Mode

Keep your searches confidential.

Available with all Enterprise plans

Your data won't leave a trace

When you enable ZeroTrace Mode, we won't store search parameters, search files, or search data on our servers. Once your search is done, it's as if it were never here.

Enable by just adding

`zero_trace=true`

to your search

ZeroTrace Mode is easy to enable or disable. Just add

`zero_trace=true`

to the searches you want ZeroTrace on, and omit it for the searches you don't.

Easier Compliance

ZeroTrace mode can make it easier to comply with regulations (GDPR, HIPAA, and CCPA) and certifications (SOC 2 Type 1, SOC 2 Type 2, and ISO 27001).

FAQs

How to access ZeroTrace mode?

ZeroTrace mode is only included in Enterprise plans. There is no cap on usage.

Can this feature be used with all of SerpApi's search APIs?

Yes, ZeroTrace mode is fully supported on all SerpApi's search APIs.

How does ZeroTrace mode work?

We skip saving parameters, metadata, and the actual search in our database entirely. We also don't store any files or search-related data on any of our servers, including our servers that connect to the actual search engines. For third-party services or search engines that are by nature outside our direct control, we add a Do Not Track (DNT) header to all HTTP requests that may contain ZeroTrace search data.

How can I debug ZeroTrace Searches?

Unfortunately, it's more difficult to debug ZeroTrace searches. We recommend re-running without the

`zero_trace=true`

flag, finding them back on your dashboard, and contacting support if needed.
