Google Shopping API - SerpApi

Google Shopping API

API uptime

99.771%

The Google Shopping Results API allows a user to scrape the results of a Google Shopping search.

The API is accessed through the following endpoint:

`/search?engine=google_shopping`

.

You can query:

[https://serpapi.com/search?engine=google\\_shopping&q=coffee](https://serpapi.com/search?engine=google_shopping&q=coffee) ([https://serpapi.com/search?engine=google\\_shopping&q=coffee](https://serpapi.com/search?engine=google_shopping&q=coffee))

utilizing a

GET

request. Head to the

playground

for a live and interactive demo.

API Parameters

Search Query

q

Required

Parameter defines the query you want to search. You can use anything that you would use in a regular Google Shopping search.

Geographic Location

location

Optional

Parameter defines from where you want the search to originate. If several locations match the location requested, we'll pick the most popular one. Head to the

`/locations.json` API

if you need more precise control. The

location

and

uule

parameters can't be used together. It is recommended to specify

location

at the city level in order to simulate a real user's search. If

location

is omitted, the search may take on the location of the proxy.

uule

Optional

Parameter is the Google encoded location you want to use for the search.

uule

and

location

parameters can't be used together.

Localization

google\_domain

Optional

Parameter defines the Google domain to use. It defaults to

google.com

. Head to the

Google domains

for a full list of supported Google domains.

gl

Optional

Parameter defines the country to use for the Google search. It's a two-letter country code. (e.g.,

us

for the United States,

uk

for United Kingdom, or

fr

for France) Head to the

Google Shopping countries

for a full list of supported Google Shopping countries.

hl

Optional

Parameter defines the language to use for the Google Shopping search. It's a two-letter language code. (e.g.,

en

for English,

es

for Spanish, or

fr

for French) Head to the Google languages for a full list of supported

Google languages

.

Advanced Filters

shops

Optional

The parameter defines the token that includes metadata about query and search filter(s). Providing

q

parameter alongside the

shops

is

not

required.

To apply multiple filters join them with

||

separator, e.g.

shops\_1||shops\_2||shops\_3

.

min\_price

Optional

Lower bound of price range query.

This parameter overrides corresponding filter embedded into

shops

parameter.

max\_price

Optional

Upper bound of price range query.

This parameter overrides corresponding filter embedded into

shops

parameter.

sort\_by

Optional

Parameter defines the sorting order of the results.

Available options:

1

- Price: low to high

2

- Price: high to low

This parameter overrides corresponding filter embedded into

shops

parameter.

free\_shipping

Optional

Show only products with free shipping.

This parameter overrides corresponding filter embedded into

shops

parameter.

on\_sale

Optional

Show only products that are on sale.

This parameter overrides corresponding filter embedded into

shops

parameter.

small\_business

Optional

Show only products from small business.

This parameter overrides corresponding filter embedded into

shops

parameter.

Pagination

start

Optional

Parameter defines the result offset. It skips the given number of results. It's used for pagination. (e.g.,

0

(default) is the first page of results,

60

is the 2nd page of results,

120

is the 3rd page of results, etc.).

For the new layout, the parameter is not recommended. To easily retrieve paginated results accurately, it is advisable to follow the link provided in

serpapi\_pagination.next

.

Serpapi Parameters

engine

Required

Set parameter to

google\_shopping

to use the Google Shopping API engine.

device

Optional

Parameter defines the device to use to get the results. It can be set to

desktop

(default) to use a regular browser,

tablet

to use a tablet browser (currently using iPads), or

mobile

to use a mobile browser.

no\_cache

Optional

Parameter will force SerpApi to fetch the Google Shopping results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to

false

(default) to allow results from the cache, or

true

to disallow results from the cache.

no\_cache

and

async

parameters should not be used together.

async

Optional

Parameter defines the way you want to submit your search to SerpApi. It can be set to

false

(default) to open an HTTP connection and keep it open until you got your search results, or

true

to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our

Searches Archive API

to retrieve your results.

async

and

no\_cache

parameters should not be used together.

async

should not be used on accounts with

Ludicrous Speed

enabled.

zero\_trace

Optional

Enterprise only. Parameter enables

ZeroTrace mode

. It can be set to

false

(default) or

true

. Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

api\_key

Required

Parameter defines the SerpApi private key to use.

output

Optional

Parameter defines the final output you want. It can be set to json (default) to get a structured

JSON

of the results, or

html

to get the raw html retrieved.

json\_restrictor

Optional

Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See

JSON Restrictor

for more details.

JSON Restrictor

Restrict your response to the fields you need for smaller, faster results and more efficient client-side parsing.

We support passing a

`json_restrictor`

parameter for all engines.

Examples

Select only

`organic_results`

,

`json_restrictor`

:

`organic_results`

Operators

Operator

Example

Description

Object index:

.

foo.bar

Select the field

bar

of the object

foo

.

Array index:

[]

foo[0]

Select the first item of the array

foo

.

Select full array:

[]

foo[]

Select all items of the array

foo

.

Array slice:

[:]

foo[0:2]

Select the first two items of the array

foo

.

This is a half-open range, meaning it includes the first index but not the last.

Subquery:

{query1, query2, ...}

foo.{bar, baz[]}.qux

Select the fields

bar

and

baz

of the object

foo

, and further select only

qux

of the array

baz

.

A query can be any valid combination of the operators.

ZeroTrace Mode

Keep your searches confidential.

Available with all Enterprise plans

Your data won't leave a trace

When you enable ZeroTrace Mode, we won't store search parameters, search files, or search data on our servers. Once your search is done, it's as if it were never here.

Enable by just adding

`zero_trace=true`

to your search

ZeroTrace Mode is easy to enable or disable. Just add

`zero_trace=true`

to the searches you want ZeroTrace on, and omit it for the searches you don't.

Easier Compliance

ZeroTrace mode can make it easier to comply with regulations (GDPR, HIPAA, and CCPA) and certifications (SOC 2 Type 1, SOC 2 Type 2, and ISO 27001).

FAQs

How to access ZeroTrace mode?

ZeroTrace mode is only included in Enterprise plans. There is no cap on usage.

Can this feature be used with all of SerpApi's search APIs?

Yes, ZeroTrace mode is fully supported on all SerpApi's search APIs.

How does ZeroTrace mode work?

We skip saving parameters, metadata, and the actual search in our database entirely. We also don't store any files or search-related data on any of our servers, including our servers that connect to the actual search engines. For third-party services or search engines that are by nature outside our direct control, we add a Do Not Track (DNT) header to all HTTP requests that may contain ZeroTrace search data.

How can I debug ZeroTrace Searches?

Unfortunately, it's more difficult to debug ZeroTrace searches. We recommend re-running without the

`zero_trace=true`

flag, finding them back on your dashboard, and contacting support if needed.

(<https://serpapi.com/search-archive-api>)

Search Archive API - SerpApi

Search Archive API

Search Archive API allows you to fetch searches created with our API. Searches don't have to be completed to be retrieved. Search status can be

Queued

,

Processing

,

Success

, or an error. You can retrieve the

html

, or the

json

of your search up to 31 days after the search has been completed.

You can query

[https://serpapi.com/searches/{search\\_id}](https://serpapi.com/searches/{search_id}), ([https://serpapi.com/searches/{search\\_id}](https://serpapi.com/searches/{search_id}))

using a

GET

request with these parameters:

API Parameters

search\_id

Required

Parameter is the search ID provided by the search API endpoint at

[search\_metadata]['id']

. (e.g.,

5b50d58a304bda2fca30bac9

)

api\_key

Required

Parameter defines the SerpApi private key to use.

output

Optional

Parameter defines the file you want. It can be set to

json

(default) to get a structured JSON of the results, or

html

to get the raw html retrieved.

API Examples

Search Archive API example

GET

[https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json?api\\_key=SECRET\\_API\\_KEY](https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json?api_key=SECRET_API_KEY) ([https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json?api\\_key=SECRET\\_API\\_KEY](https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json?api_key=SECRET_API_KEY))

Pixel Position

on Search Archive API example

Pixel Position API can be performed on archive searches by setting the output to

json\_with\_pixel\_position

GET

[https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json\\_with\\_pixel\\_position?api\\_key=SECRET\\_API\\_KEY](https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json_with_pixel_position?api_key=SECRET_API_KEY)  
([https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json\\_with\\_pixel\\_position?api\\_key=SECRET\\_API\\_KEY](https://serpapi.com/searches/5b50d58a304bda2fca30bac9.json_with_pixel_position?api_key=SECRET_API_KEY))

Supported Locations API - SerpApi

Supported Locations API

Locations API allows you to search SerpApi supported locations. It should return an array of locations ordered by reach. Locations that reach the most people will be first.

This API is free to use

. Download the full

JSON

list of

supported locations:

Download

You can query

<https://serpapi.com/locations.json> (<https://serpapi.com/locations.json>)

using a

GET

request with these parameters:

## API Parameters

q

Optional

Parameter restricts your search to locations that contain the supplied string. (e.g.,

Austin

will find 'Austin, TX', 'The University of Texas at Austin', 'Rochester, MN-Mason City, IA-Austin, MN,United States', etc.)

limit

Optional

Parameter limits the number of locations returned. (e.g.,

5

will return only 5 locations. Maximum is 10.)

## API Examples

### Locations API example

The URL below fetches the 5 biggest locations that contains "Austin" in their name in our database. You can then use the location canonical name (e.g.,

"Austin,Texas,United States"

) or the location id (e.g.,

"585069efee19ad271e9c9b36"

) as the value of the param

location

for the

/search

API to get more precise results.

GET

<https://serpapi.com/locations.json?q=Austin&limit=5> (<https://serpapi.com/locations.json?q=Austin&limit=5>)
